

## Low Cost, Small Package, 120VAC Microstepping Drive

Compumotor's new E-AC is a low-cost, high-performance, high-reliability microstepping drive in a small package. The design of the E-AC is based on the design of our proven Zeta and OEM750 microstepping drives. It provides up to 3.5 Amps of current to the motor and accepts 120VAC direct-online power only. All step motors are subject to mid-range instability or oscillations. The E-AC incorporates an anti-resonance circuitry that aggressively and effectively suppresses these oscillations, thus taking advantage of the full capabilities of the step motor.

### Features

#### Performance

- Designed for use with motor inductance of 0.5 mH - 80 mH
- 3-state current control allows the drive and motor to run cooler and more efficiently than 2-state drives
- Selectable resolution up to 50,800 steps/rev
- Auto standby reduces motor current (and heating) at rest
- Provides 0.02 Amps to 3.5 Amps (peak)
- 95 - 132VAC power supply input
- Four predefined current waveforms to optimize smoothness

#### Protection

- Optically isolated step and direction inputs
- Short circuit protection – phase-to-phase and phase-to-ground
- Auto-run feature to verify proper system operation
- Over temperature circuitry protects the drive from thermal damage

#### Physical

- Status/fault LED indicators to confirm proper operation
- ASIC and surface-mount technologies minimize product footprint, overall package size and increase product reliability
- Optically isolated fault output for embedded applications
- Simplified, 2-screw mounting
- Overall dimensions: 5.35 x 4.3 x 1.9 in. (133 x 109 x 48 mm)
- Certified as UL-recognized component
- Approvals: CE (LVD), and CE (EMC)

**E-AC Specifications**

	Parameter	Value
<b>Power Input</b>	AC	95 - 132 VAC @ single phase 50/60 Hz
<b>Performance</b>	Accuracy	±5 arc min (0.0833°) typical. Unloaded-bidirectional with Compumotor supplied motors. Other motors may exhibit different absolute accuracy. ±1 arc min (0.0167°) typical/per each frictional load equal to 1% rated torque. Loaded-in addition to unloaded accuracy.
	Repeatability	±5 arc sec (0.0014°) typical. Unloaded-one revolution returning to start point from same direction.
	Hysteresis	Less than 2 arc min (0.0334°) unloaded-bidirectional.
	Resolution	16 selectable choices: 200, 400, 1000, 2000, 5000, 10000, 12800, 18000, 20000, 21600, 25000, 25400, 25600, 36000, 50000, 50800
	Waveform	Selectable. Allows waveform shaping for optimum smoothness or relative accuracy. Pure sine; -4%, -6%, -8%, 3rd harmonic.
	<b>Amplifier</b>	Type
Number of Phases		2
Output Current		0.02–3.5 Amps peaks of Sine
Standby Current Reduction		50% of selected motor current
Nominal Chopping Frequency		20 kHz
Max Stepping Rate		2 MHz max pulse rate; 50 rps max speed
Step Input		High-going pulse, 200 nsec min width; max pulse rate is 2 MHz; User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to maximum of 15 mA
Direction Input		Logic High = positive (CW) rotation—3.5–5.0V Logic Low = negative (CCW) rotation—0–0.4V User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to a maximum of 15 mA. The direction input must be stable for at least 200 µsec before the drive receives the first pulse
Fault Output		Open-Collector/Emitter, Vce = 70 VDC, Vce sat = 0.3 VDC, Ic = 40 mA (max) Maximum dissipation = 40 mW Conducting = normal operation Non conduction = drive fault
<b>Protective Circuits</b>		Short Circuit*
	Overtemperature*	The drive will fault if heat plate exceeds 55°C
<b>Environmental</b>	Drive Temp	Max allowable ambient temperature is 122°F (50°C). Fan cooling may be required if airflow is restricted.
	Humidity	0 to 95%, Non-condensing
<b>Physical</b>	Drive Dimensions	5.35 x 4.34 x 1.9in (133 x 109 x 48 mm)
	Weight	1.2 lbs
<b>Motor</b>	Type	Two-phase hybrid permanent magnet, 1.8°
	Number of Leads	4, 6, or 8
	Inductance Range	0.5 minimum; 5 to 50 mH recommended range; 100 mH max
* Drive shuts down in conditions listed. Power must be cycled or drive reset to resume operations.		

See Servo Drive section for the full line of Gemini servo drives and drive/controllers.

## Lower-Cost DC Power Input Microstepping Drive

Compumotor's new E-DC microstepping drive is designed for a 48VDC input power requirement and provides current up to 4.8 Amps peak of current to the motor.

### Features

#### Performance

- Designed for use with motor inductance range of 0.2 mH–80 mH
- Three-state current control allows the drive and motor to run cooler and more efficiently than two-state drives
- Selectable resolution up to 50,800 steps/rev
- Auto standby reduces motor current (and heating) at rest
- Provides 0.2 Amps to 4.8 Amps (peak)
- Single 24-48 VDC power supply input
- Compatible with a variety of motors
- Six predefined current waveforms to optimize smoothness

#### Protection

- Optically isolated step and direction inputs
- Short circuit protected—phase-to-phase, and phase-to-ground
- Power dump circuitry to protect drive from regeneration caused by large inertial loads
- Self-test feature to verify proper system operation
- Overtemperature circuitry protects the drive from thermal damage

#### Physical

- Status/fault LED indicators to confirm proper operation
- ASIC and surface mount technologies minimize product footprint, overall package size, and increase product reliability
- Removable snap-on molded cover for convenient configuration and protection against contaminants
- Optically isolated fault output for embedded applications
- Heat plate design allows thermal dissipation through a suitable heat dissipating mounting surface
- Simplified, two-screw mounting
- Right-angle screw terminal allows side-to-side mounting or Eurorack compatibility
- Overall dimensions 5.0 x 3.6 x 1.6 in. (127 x 91 x 41 mm)
- Convenient configuration DIP switches
- Certified as UL-recognized component
- CE (LVD & EMC)

**E-DC Drive Specifications**

	Parameter	Value
<b>Power Input</b>	DC	24–48 VDC @ 2.0 Arms (motor dependent)
	<b>Performance</b>	
	Accuracy	±5 arc min (0.0833°) typical. Unloaded-bidirectional with Compumotor supplied motors. Other motors may exhibit different absolute accuracy. ±1 arc min (0.0167°) typical/per each frictional load equal to 1% rated torque. Loaded-in addition to unloaded accuracy.
	Repeatability	±5 arc sec (0.0014°) typical. Unloaded-one revolution returning to start point from same direction.
	Hysteresis	Less than 2 arc min (0.0334°) unloaded-bidirectional.
	Resolution	16 selectable choices: 200, 400, 1000, 2000, 5000, 10000, 12800, 18000, 20000, 21600, 25000, 25400, 25600, 36000, 50000, 50800
	Waveform	Selectable. Allows waveform shaping for optimum smoothness or relative accuracy. Pure sine; -4%, -6%, -8%, -10% 3rd harmonic.
<b>Amplifier</b>	Type	20 kHz fixed frequency, variable duty cycle pulse width modulated (PWM ) Current Controlled, bipolar chopper
	Number of Phases	2
	Output Current	0.2–4.8 amps current per phase peak (selectable)
	Drive Supply Voltage	24–48 VDC (dependent on external power supply)
	Standby Current Reduction	25%, 50%, or 75% of selected motor current
	Nominal Chopping Frequency	20 kHz
	Max Stepping Rate	2 MHz max pulse rate; 50 rps max speed
	Step Input	High-going pulse, 200 nsec min width; max pulse rate is 2 MHz; User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to maximum of 15 mA
	Direction Input	Logic High = positive (CW) rotation—3.5–5.0V Logic Low = negative (CCW) rotation—0–0.4V User-supplied driver for the step and direction inputs should be capable of providing a minimum of 6.5 mA to a maximum of 15 mA. The direction input must be stable for at least 200 µsec before the drive receives the first pulse
	Fault Output	Open-Collector/Emitter, Vce = 70 VDC, Vce sat = 0.3 VDC, Ic = 10 mA (max) Maximum dissipation = 55 mW Conducting = normal operation Non conduction = drive fault
	<b>Protective Circuits</b>	Short Circuit*
Undervoltage		If DC supply drops below 24 VDC
Overtemperature*		The drive will fault if heat plate exceeds 55°C
<b>Environmental</b>	Drive Temp	Max allowable ambient temperature is 122°F (50°C). Fan cooling may be required if airflow is restricted. Max allowable heatplate temperature is 55°C.
	Humidity	0 to 95%, Non-condensing
<b>Physical</b>	Drive Dimensions	5.0 x 3.6 x 1.6 in (127 x 91 x 41 mm)
	Weight	12 oz
<b>Motor</b>	Type	Two-phase hybrid permanent magnet, 1.8°
	Number of Leads	4, 6, or 8
	Inductance Range	0.2 mH–80 mH

\* Drive shuts down in conditions listed. Power must be cycled or drive reset to resume operations.
